

# SERVICE PORTFOLIO

Established in 2010, DMNDT is a part of DM Group Services providing speed and efficiency via Rope Access Combined with Inspection and Mechanical Services, upstream and downstream anywhere around the globe.

**SAFER, TOGETHER**

# ABOUT US

Our pool of IRATA-certified NDT rope access technicians have allowed us to become one of the most reputable providers of above-hull and at-height inspection, repair and maintenance services in the region. Our team stays diligent and up-to-date with current practices, and routinely undergo trainings and license upgrading. We ensure safety is prioritised at all times, and our technical understanding is updated.

At DM NDT, all instructors hold the requisite accreditations to provide IRATA Training Course, with the added benefit of bringing their years of hands-on experience to each student. Our fully equipped training centre is located at the DM Group Services headquarters in Jurong.

We offer a broad spectrum of NDT technologies, allowing companies to choose the appropriate repair and maintenance service required for their structures and equipment. We assure that inspection analysis and reports will be accurate and tailored to your requirements.

Non-Destructive Testing (NDT) is a rigorous series of processes involving analytical tools, techniques and standards used to inspect, measure and assess the safety of industrial assets across a wide range of sectors.
